

Meeting w/ Janet Iwasa - October 17, 2014

Break up the narration into 3 sections, include transitions for all 3 sections

To simplify and provide Janet with more directive visuals for section 0:49 (lysis)

Separate the gel macro from the gel micro when pouring to make the animation much easier

Look at the SDS portion of the animation (6:57) and think about what verbiage we need to add in order to reference migration of proteins within SDS to make it comparable to the section on the naturing section.
